#### 1.3 Budget execution

| Total Budget   | Expenditure year N<br>(31/12/2012) | Balance           | Total Disbursement<br>rate |
|----------------|------------------------------------|-------------------|----------------------------|
| 18,000,000 EUR | 3.8 million euro                   | 13.6 Million euro | 24%                        |

#### 1.4 Summary

Formulate 5 key points (briefly, in one or two sentences) that a reader of this report should remember.

In 2012, the indicators were revised and targets have been set in order to better capture what the programme wants to achieve.

For seed, a comprehensive approach to innovate the whole seed sector was developed and is being implemented. This includes public and private sector activities.

In advisory services, the total number of farmers reached through Farmer Field Schools and Community Mobilization Campaigns already reached 147,000.

The foreseen activities to improve demand articulation of farmers have not yet been implemented as they are considered not so relevant. A revision of activities is prepared and will be presented to the steering committee for approval.

The budget execution of the programme is high (24% of the total budget spent in the first 18 months of the 5 year intervention). Smart use of available funds is needed ensure that we will achieve all targets.

<sup>&</sup>lt;sup>3</sup>Name and Signature

# 2 Analysis of the intervention

#### 2.1 Context

#### 2.1.1 General context

- 1. The spread of the important banana disease BXW and the decision of MINAGRI to increase the efforts to combat the disease has pushed the programme to implement community mobilization campaign on BXW control and banana rehabilitation rapidly and on a large scale.
- Two food processing plants (one for cassava and one for soy bean) started their operation. This has influenced the seed operational plans, research and FFS priorities.
- 3. The Rwandan Government have invested in a professional seed processing plant (The Rwanda Seed Enterprise). Now the Rwanda Agricultural Board is responsible for the plant. The expected start of operation in March 2013 had an influence operational plans and on support to private sector.
- The RAB has introduced a new extension approach: In every village, one farmer is selected as agro-promoter. The programme is ask to the link the FFS Facilitators.
- 5. Scarcity of potato seed has pushed RAB and the programme to promote the positive selection in farmer saved seed production.

#### 2.1.2 Institutional context

- 1. RAB was created in July 2011, but the structure of RAB was only finalized in 2012. The focus in RAB lays on commodity programmes who implement research and extension activities. All activities are coordinated at zonal level (North, South, East, West).
- 2. Score: Appropriate based on existing structure and objectives
  - International Technical Assistants (ITA) and National Coordinators (NC) work close to RAB management (sustainability)
    - DELCO & DI work Close to MINAGRI management
  - DELCO/ TA work close to CICA management
  - The implementation is fully integration in RAB. This is good but might not be ideal for some of activities to support the private sector.

Note : The structure of RAB will undergo a reform in 2013

#### 2.1.3 Management context: execution modalities

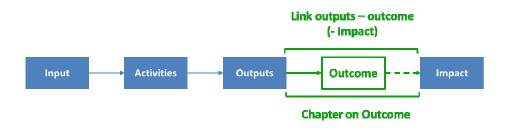

Score: Appropriate (except for public seed production)

- 1. MOU with RAB came in force in the beginning of 2012. This clearly improved the implementation of the activities and the achievement of the results.
- 2. We recognition that co-management cannot strictly be applied as the MOU allows zones to pay for expenditures without prior approval from BTC (Activity plans and budget are approved, but not every single expenditure). Especially for the public seed production, it is challenging to have control.

#### 2.1.4 Harmo-context

- 1. The programme is fully aligned with Rwandan procedures and is well harmozined with other development partners.
- 2. BTC takes part in the Agricultural Sector Working group and the BTC/The SSPAT 2 programme is co-chair of the sub-sector working group on extension.
- The FFS implementation is harmonisation with other organisations
   The programme collaborates with other organisations who are active in seed sector
- 5. RAB/ BTC took the lead in developing a comprehensive overview of support to the potato value chain in Rwanda.
- 6. The ownership by Rwandan partners is high

#### 2.2 Outcome

#### 2.2.1 Analysis of progress made

| Outcome: Improved access to advisory services for crops and livestock and access to and use of high quality planting materials and seed, for men and women                               |                                |   |   |                            |                            |   |  |

#### 2.2.3 Potential Impact

- Based on fact that we work on national scale,
- · Based on fact that we work on key inputs: seed and advisory services,
- Based on fact that we work on the root causes,
- Based on the fact that we work on key areas of intervention,
- Based on the fact that there is a high level of ownership,
- Based on the fact that we have a comprehensive approach,

we are confident that the link between the outcome and impact is strong and therefore the potential impact very high.

#### 2.2.4 Quality criteria

| 1. RELEVANCE: The degree to which the intervention is in line with local and national policies and priorities as well as with the expectations of the beneficiaries |  |  |  |  |  |  |  |  |
|---|--|--|--|--|--|--|--|--|
|   | In order to calculate the total score for this Q-criterion, proceed as follows: 'At least one 'A', no 'C' or 'D' = A;<br>Two times 'B' = B; At least one 'C', no 'D' = C; at least one 'D' = D |  |  |  |  |  |  |  |
| 1.1 W   | /hat i   | s the present level of relevance of the project?   |  |  |  |  |  |  |
| $\boxtimes$   | Α  | Clearly still embedded in national policies and Belgian strategy, responds to aid effectiveness commitments, highly relevant to needs of target group.   |  |  |  |  |  |  |
|   | в  | Still fits well in national policies and Belgian strategy (without always being explicit), reasonably compatible with aid effectiveness commitments, relevant to target group's needs.                                       |  |  |  |  |  |  |
|   | С  | Some issues regarding consistency with national policies and Belgian strategy, aid effectiveness or relevance.   |  |  |  |  |  |  |
|   | D  | ontradictions with national policies and Belgian strategy, aid efficiency commitments;<br>elevance to needs is questionable. Major adaptations needed.   |  |  |  |  |  |  |
| 1.2 A   | s pre  | sently designed, is the intervention logic still holding true?   |  |  |  |  |  |  |
| $\boxtimes$   | A  | Clear and well-structured intervention logic; feasible and consistent vertical logic of objectives;<br>adequate indicators; Risks and Assumptions clearly identified and managed; exit strategy in<br>place (if applicable). |  |  |  |  |  |  |
|   | в  | Adequate intervention logic although it might need some improvements regarding hierarchy of objectives, indicators, Risk and Assumptions.  |  |  |  |  |  |  |
|   | С  | Problems with intervention logic may affect performance of project and capacity to monitor and evaluate progress; improvements necessary.  |  |  |  |  |  |  |
|   | D  | Intervention logic is faulty and requires major revision for the project to have a chance of success.  |  |  |  |  |  |  |
|   |  |  |  |  |  |  |  |  |

2. EFFICIENCY OF IMPLEMENTATION TO DATE: Degree to which the resources of the intervention (funds, expertise, time, etc.) have been converted into results in an economical way (assessment for the <u>whole of the intervention</u>)

In order to calculate the total score for this Q-criterion, proceed as follows: 'At least one 'A', no 'C' or 'D' = A; Two times 'B' = B; At least one 'C', no 'D' = C; at least one 'D' = D

| 2.1 H | 2.1 How well are inputs (financial, HR, goods & equipment) managed? |   |  |  |  |  |
|-------|---|---|--|--|--|--|
|       | Α   | All inputs are available on time and within budget.   |  |  |  |  |
|       | в   | Most inputs are available in reasonable time and do not require substantial budget adjustments.<br>However there is room for improvement. |  |  |  |  |

|       | С                                 | ailability and usage of inputs face problems, which need to be addressed; otherwise results y be at risk.   |  |  |  |  |  |
|-------|-----------------------------------|---|--|--|--|--|--|
|       | D                                 | Availability and management of inputs have serious deficiencies, which threaten the achievement of results. Substantial change is needed.                                       |  |  |  |  |  |
| 2.2 ⊦ | 2.2 How well are outputs managed? |   |  |  |  |  |  |
|       | Α                                 | outputs have been and most likely will be delivered as scheduled with good quality ntributing to outcomes as planned.   |  |  |  |  |  |
|       | в                                 | Dutput delivery is and will most likely be according to plan, but there is room for improvement in erms of quality, coverage and timing.  |  |  |  |  |  |
|       | С                                 | Some output are/will be not delivered on time or with good quality. Adjustments are necessary.  |  |  |  |  |  |
|       | D                                 | Quality and delivery of outputs has and most likely will have serious deficiencies. Major adjustments are needed to ensure that at least the key outputs are delivered on time. |  |  |  |  |  |

3. EFFECTIVENESS TO DATE: Degree to which the outcome (Specific Objective) is achieved as planned at the end of year N

| In order to calculate the total score for this Q-criterion, proceed as follows: 'At least one 'A', no 'C' or 'D' = A; |
|---|
| Two times 'B' = B; At least one 'C', no 'D' = C; at least one 'D' = D   |

| 3.1         | 3.1 As presently implemented what is the likelihood of the outcome to be achieved? |  |  |  |  |  |  |
|-------------|--|--|--|--|--|--|--|
|             | Α  | Full achievement of the outcome is likely in terms of quality and coverage. Negative effects (if any) have been mitigated.   |  |  |  |  |  |
| $\boxtimes$ | в  | Outcome will be achieved with minor limitations; negative effects (if any) have not caused much harm.  |  |  |  |  |  |
|             | С  | Outcome will be achieved only partially among others because of negative effects to which management was not able to fully adapt. Corrective measures have to be taken to improve ability to achieve outcome.  |  |  |  |  |  |
|             | D  | Project will not achieve its outcome unless major, fundamental measures are taken.   |  |  |  |  |  |
|             |  | ctivities and outputs adapted based on the achieved results in order to the outcome<br>Objective)?   |  |  |  |  |  |
|             | A  | The project is successful in adapting its strategies / activities and outputs to changing external conditions in order to achieve the outcome. Risks and assumptions are managed in a proactive manner.  |  |  |  |  |  |
|             | в  | The project is relatively successful in adapting its strategies to changing external conditions in<br>order to achieve its outcome. Risks management is rather passive.  |  |  |  |  |  |
|             | С  | The project has not entirely succeeded in adapting its strategies to changing external conditions in a timely or adequate manner. Risk management has been rather static. An important change in strategies is necessary in order to ensure the project can achieve its outcome. |  |  |  |  |  |
|             | D  | The project has failed to respond to changing external conditions, risks were insufficiently managed. Major changes are needed to attain the outcome.  |  |  |  |  |  |

3. POTENTIAL SUSTAINABILITY: The degree of likelihood to maintain and reproduce the benefits of an intervention in the long run (beyond the implementation period of the intervention).

In order to calculate the total score for this Q-criterion, proceed as follows: At least 3 'A's, no 'C' or 'D' = A; Maximum two 'C's, no 'D' = B; At least three 'C's, no 'D' = C; At least one 'D' = D

| 3.1 | 3.1 Financial/economic viability?  |  |  |  |  |  |  |
|-----|--|--|--|--|--|--|--|
|     | Financial/economic sustainability is potentially very good: costs for services and maintenance are covered or affordable; external factors will not change that. |  |  |  |  |  |  |
|     | в  | Financial/economic sustainability is likely to be good, but problems might arise namely from changing external economic factors. |  |  |  |  |  |

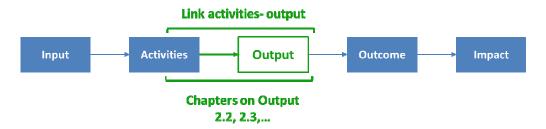

| $\boxtimes$ | С              | Problems need to be addressed regarding financial sustainability either in terms of institutional or target groups costs or changing economic context.   |  |  |  |  |  |  |
|-------------|----------------|--|--|--|--|--|--|--|
|             | D              | Financial/economic sustainability is very questionable unless major changes are made.  |  |  |  |  |  |  |
|             |                | is the level of ownership of the project by target groups and will it continue after the end of support?   |  |  |  |  |  |  |
|             | A              | The JLCB and other relevant local structures are strongly involved in all stages of<br>implementation and are committed to continue producing and using results.   |  |  |  |  |  |  |
| $\boxtimes$ | в              | Implementation is based in a good part on the JLCB and other relevant local structures, which are also somewhat involved in decision-making. Likeliness of sustainability is good, but there is room for improvement.      |  |  |  |  |  |  |
|             | С              | Project uses mainly ad-hoc arrangements and the JLCB and other relevant local structures to ensure sustainability. Continued results are not guaranteed. Corrective measures are needed.                                   |  |  |  |  |  |  |
|             | <u>D</u>       | Project depends completely on ad-hoc structures with no prospect of sustainability. Fundamental changes are needed to enable sustainability.   |  |  |  |  |  |  |
|             | What<br>icy le | is the level of policy support provided and the degree of interaction between project and<br>/el?  |  |  |  |  |  |  |
| $\boxtimes$ | Α              | Policy and institutions have been highly supportive of project and will continue to be so.   |  |  |  |  |  |  |
|             | в              | Policy and policy enforcing institutions have been generally supportive, or at least have not hindered the project, and are likely to continue to be so.   |  |  |  |  |  |  |
|             | С              | Project sustainability is limited due to lack of policy support. Corrective measures are needed.   |  |  |  |  |  |  |
|             | D              | Policies have been and likely will be in contradiction with the project. Fundamental changes needed to make project sustainable.   |  |  |  |  |  |  |
| 4.4         | How            | well is the project contributing to institutional and management capacity?   |  |  |  |  |  |  |
|             | Α              | Project is embedded in institutional structures and contributed to improve the institutional and management capacity (even if this is not a explicit goal).  |  |  |  |  |  |  |
| $\boxtimes$ | в              | Project management is well embedded in institutional structures and has somewhat contributed to capacity building. Additional expertise might be required. Improvements in order to guarantee sustainability are possible. |  |  |  |  |  |  |
|             | С              | Project relies too much on ad-hoc structures instead of institutions; capacity building has not been sufficient to fully ensure sustainability. Corrective measures are needed.  |  |  |  |  |  |  |
|             | D              | Project is relying on ad hoc and capacity transfer to existing institutions, which could guarantee sustainability, is unlikely unless fundamental changes are undertaken.  |  |  |  |  |  |  |

Note: for 4.1. Half of the groups voted B and the other half C. In fact, we all agreed that the actions that need to be taken to increase the economic sustainability are already addressed in the action plans, but several important ones are not yet implemented. So, the difference is that half of the group considered that the issues were already addressed as they appear already in the action plans (scoring B), while the other half of the groups considered that as the changes are not yet implemented, they still need to be addressed (scoring C). Since we were unable to come to a consensus, we decided to stick both B and C.

Note 4.2. Half of the groups voted A and the other half B. In fact, we all agreed that the likeness for sustainability is good, but the ones who voted B, found that some elements require us to be cautious. For example, most of the activities are implemented by RAB staff who are paid by the programme. There indeed a commitment from RAB to take over the staff after two years, but the total number of RAB staff is not decided by RAB itself, buy by another ministry. Therefore, the group who voted B finds that only when the staff is effectively paid by RAB, it could be A. Since we were unable to come to a consensus, we decided to stick B and C.

| Criteria       | Score |
|----------------|-------|
| Relevance      | А     |
| Effectiveness  | А     |
| Sustainability | В     |
| Efficiency     | В     |

<sup>8</sup> A: B C D

The activities are ahead of schedule The activities are on schedule The activities are delayed, corrective measures are required. The activities are seriously delayed (more than 6 months). Substantial corrective measures are required.

#### 2.3.2 Budget execution

Budget execution rate = 27%. Mainly achieved thanks to implementation of Memorandum of Understanding. Major expenses relate to the production of seeds.

The farmers reached through<br>the present intervention are reporting a significant increase of productivity and<br>income thanks to enhanced technical skills/knowledge. |
|---|---|
| Progress made towards the achievement of the output (on the basis of indicators):   | Progress faster than foreseen at the beginning of year.   |
| Issues that arose, influencing factors (positive or negative):  | <b>Positive factors</b> : i) Rwandan authorities believe in FFS approach and are committed for implementing it with the program, ii) A strong commitment from the agricultural communities.                                 |
| Unexpected results (positive or negative):  | <b>Positive results</b> : i) Development of CMC concept is an unexpected side effect of FFS success, ii) Neighbours and other organizations recognize skills of the farmers trained by the program and are using them       |

#### 2.6.2 Budget execution

Budget execution: 39%. There is a strong commitment of Rwanda and a request to speed up FFS and to increase number of beneficiaries. Moreover, there has been an innovative concept of community mobilization campaign (CMC) developed and implemented for specific topics such as BXW and striga management. This latest was not foreseen in TFF but is successful and is complementary to the FFS approach.

#### 2.6.3 Quality criteria

| Criteria       | Score |
|----------------|-------|
| Efficiency     | В     |
| Effectiveness  | Α     |
| Sustainability | В     |

| Issues that arose, influencing factors (positive or negative):                              |   |                                |       |                       |                        |       |                            |   |
| Unexpected results (positive or negative):  |   |                                |       |                       |                        |       |                            |   |

#### 2.7.2 Budget execution

Budget execution=17%. This execution rate is mainly due to the realization of the baseline study. Other activities carried out for this result do not specifically request budget for the moment.

#### 2.7.3 Quality criteria

| Criteria       | Score |
|----------------|-------|
| Efficiency     | А     |
| Effectiveness  | В     |
| Sustainability | В     |

# **3 Transversal Themes**

#### 3.1 Gender

The programme has a good balance with 49% of the FFS beneficiaries and 46% of CMC beneficiaries being women. With being member of a FFS group, women are economically empowered and this also strengthens their position in the family and within the community.

Where relevant, the indicators are collected with gender disaggregation. This for example showed that less women pick up innovation introduced through FFS, but that increase in productivity is higher for women than men. This data will be further analysed at crop specific level.

In seed we do not have a gender balance but the performance of men and women is the similar.

In 2013, specific gender activities planned. The focus will be positive masculinity and family dialogue in order to achieve economic empowerment of women and decrease gender based violence. In QDS production, the programme will aim at 50% female producers.

#### 3.2 Environment

- 1. The program has been training/sensitizing farmers to use less pesticides and this has a beneficial effect on the biodiversity and quality of air and water.\
- 2. Conservation of genetic resources (plant varieties) has been applied and adopted/implemented by our beneficiaries.
- 3. Organic fertilization improves the biological activity in the soil and soil structures.
- 4. Crop rotation and integrated production methods contribute to preserving soil fertility and productivity.

#### 3.3 Other

HIV/AIDS:

- 1. The program is empowering HIV affected farmers through the FFS training process and like that they are not excluded. They use skills from FFS trained to increase the production and contribute to improve the nutrition status.
- 2. During the FFS session, a special lesson to sensitize about HIV is provided to the different FFS groups.

# 4 Steering and Learning

# 4.1 Action Plan

| Action plan  | Source  | Actor  | Deadline    |
|--|---|--|-------------|
| Description of the action/decision to be taken   | The sub-chapter<br>to which the action<br>refers (e.g. 2.4) | The person<br>responsible for<br>taking the<br>decision/taking<br>action | Q3 or Q4 of |
| Steering Committee to approve that we will not<br>support the set-up of the district agricultural<br>platforms (result 3)                      | Output 3  | Steering<br>Committee  | Q1          |
| Strengthen crop-specific seasonal review by facilitators and their link to RAB programmes and sectors/districts to improve demand-articulation | Output 3  | Steering<br>Committee  | Q1          |
| Approve piloting payment models for FFS  | Risks   | Steering<br>Committee  | Q1          |
| Discuss the possibility to limit number of<br>commodities for FFS from 2013B   | Output 4  | RAB +<br>programme   | Q1          |
| Approve targets by Steering Committee  | All   | Steering<br>Committee  | Q1          |
| Complete a road-map on how FFS can reach each village with 1 crop, later with 3 crops  | Output 4  | Steering<br>committe   | Q1          |
| Approve action plan for private seed sector  | Output 2  | Steering<br>Committee  | Q1          |

### 4.2 Lessons Learned

Capture important Lessons Learned from the intervention's experience. Lessons Learned are new insights that must remain in the institutional memory of BTC and partners. The lessons learned can be drawn from activities, outputs, outcome (or a combination of levels or any other aspect of the intervention and its environment).

| Lessons learned                    | Target audience   |
|------------------------------------|---|
| Description of the lesson learned. | The audience that may<br>be interested in the<br>lesson learned.<br>(Project, |
|                                    | Representation, BTC<br>HQ department, partner<br>department).                 |

| the FFS facilitators have at farm level is truly amazing. By using thousands of trained facilitators, several hundred thousand families can be reached at an affordable cost | Rwandan<br>Partners, BTC,<br>other seed<br>interventions |
|--|--|
| in a comprehensive approach.   | Rwandan<br>Partners, BTC,<br>other seed<br>interventions |

| Backstopping missions since<br>01/01/2012                             | 1 <sup>st</sup> Backstopping Jan 9 – Jan 15, 2013 |

#### 5.4 "Budget versus current (y – m)" Report

Provide "Budget versus current (y - m)" Report (this can be annexed to this document and doesn(t have to be included in the report as such.)

#### 5.5 Resources

In this <u>optional</u> annex, interventions should mention any material on the effects of the intervention on the beneficiaries that is available. Material that uses methods that focuses on the beneficiaries is highly appreciated ("story telling", ...). Also indicate whether audio-visual material, studies, capitalisation reports or (scientific) publications which highlight the effects of the intervention on the beneficiaries, has been produced and is available.

# 5.6 Decisions taken by the JLCB and follow-up

Provide an overview of the *important* strategic decisions taken by the JLCB and the follow-up of those decisions.

| Decision to take   |                             |        |        |       | Action  |       |          | Follow-up |        |
|--|-----------------------------|--------|--------|-------|---|-------|----------|-----------|--------|
| Decision to take   | Period of<br>identification | Timing | Source | Actor | Action(s)   | Resp. | Deadline | Progress  | Status |
| The SC requested the programme<br>management and RAB to submit a clear and<br>concise document that shows how the <b>seed</b><br><b>initiative approach</b> is different from<br>previous interventions in the seed sector.  | 2 <sup>nd</sup> SC          |        |        |       | Strategy was approved in 3 <sup>rd</sup> SC   |       |          |           | -      |
| The SC requested to the programme<br>management to present complete <b>spending</b><br><b>plan</b> up to the end of the programme  | 2 <sup>nd</sup> SC          |        |        |       | Done, approved in 3dr SC  |       |          |           |        |
